The second Penang bridge toll plaza complex receives the Platinum Green Building Index Certification award.

THE green technology used for the second Penang bridge toll plaza complex in Batu Kawan has earned the building a Platinum Green Building Index Certification award.

“The complex is also the first building in Penang to be awarded platinum,” said Jambatan Kedua Sdn Bhd managing director Datuk Dr Ismail Mohamed Taib.

Apart from using the Industrialised Building Systems (IBS), the building incorporates passive architecture to reduce energy requirements, a rain water harvesting system for internal use, application of renewable energy source such as the wind turbines and solar panels on top of its building to generate electricity.

The second Penang bridge project was presented the Green Apple Award in June 2013 and appointed Green World Ambassador by The Green Organisation, UK, for its green efforts.

“It is the most auspicious time for JKSB to be awarded the prestigious certificate for its green efforts just before the official opening ceremony of the second Penang bridge tomorrow,” he said.
